General Description

The Echo 44 is a flexible printed circuit antenna designed for Wi-Fi 6E and Wi-Fi 7 technologies, operating efficiently across the 2.4 GHz, 5 GHz, and 6 GHz Wi-Fi bands. With an exceptional radiation efficiency of up to 90%, a low VSWR, and a gain of 3-5 dBi, this omnidirectional antenna ensures robust coverage across the Wi-Fi spectrum.

The Echo 44 also supports the 5G C-bands n48, n77, and n78, enhancing its versatility in modern communication applications.

Constructed with a flexible polyimide (PI) substrate, etched with precision copper tracks for radiating elements, and backed with an adhesive layer for easy mounting, this ground plane independent antenna can be positioned on both flat and curved surfaces without compromising RF performance. This capability allows for versatile placements in applications where mounting flexibility and space optimisation are paramount.

Terminated with 100 mm of 1.13 mm coaxial cable, with I-PEX MHF1 (uFL) or I-PEX MHF4 connectors as standard, the Echo 44 can be customised with other cable lengths and connector types for high volume projects.

NOTE: For each frequency band, Siretta provides a traffic light indication to show the suitability of the antenna for use at that frequency band. Determination of exactly what makes an antenna good or bad at any frequency is subjective.

The view presented is that of Siretta's engineering team having taken into account the efficiency and VSWR measurements. The end user is advised to use their own criteria and/or testing to confirm suitability.
